

The Alternative Way  
to Pack Fresh

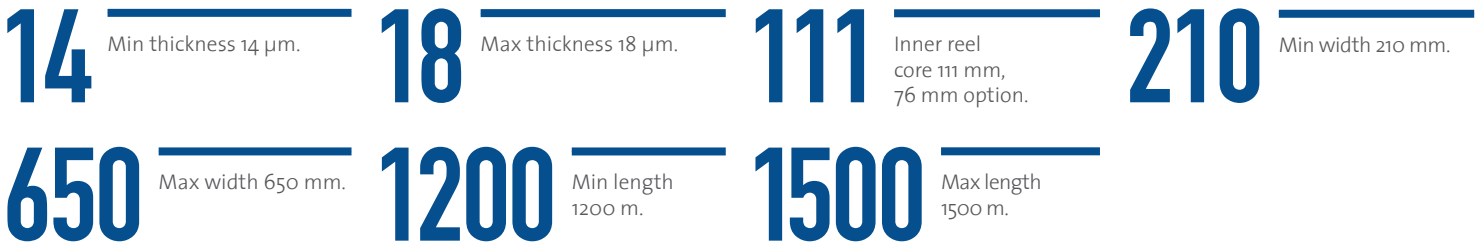

**FILM PEX**  
EN

**PEX** is poly-olefin based stretch film or asymmetrical multilayer film containing styrene and polyethylene polymers, ideal for use in packaging of fresh foods, including products with a high fat content. It shows its highest potential with automatic wrapping machines, especially from the Elixia® series produced by Gruppo Fabbri. The underlying technology of the latter allows for the optimisation of the consumption of material, using its stretching quality. The use of reduced amounts of material than standard results in reduced environmental impact, as well as reduced packaging costs.

#### Main characteristics

<b>Glossy quality of the material</b>	Notable improvement in product freshness.
<b>Preservation of organoleptic properties</b>	Safety and better food preservation.
<b>Greater permeability</b>	The PEX film allows for greater product “respiration”, limiting the formation of bacterial agents.
<b>Longer Shelf life</b>	With a permeability that is five times higher than that of similar film, PEX allows for better food preservation and longer shelf life.
<b>Flexibility of use</b>	Can be used both in industrial wrapping machines with reels from 300 to 550mm and in standard Elixia® machines with reels from 210 to 280 mm.
<b>Reduced material consumption</b>	Optimisation of material consumption due to its stretching quality.
<b>Packaging without tray</b>	Ability to use the new 210 mm reel applied to Elixia® machines for packaging without tray.
<b>Wide range of solutions</b>	The food film of Gruppo Fabbri has different formulations and thickness depending on the product it is to be used for.
