Data Management Software

FGINSTORE

EN

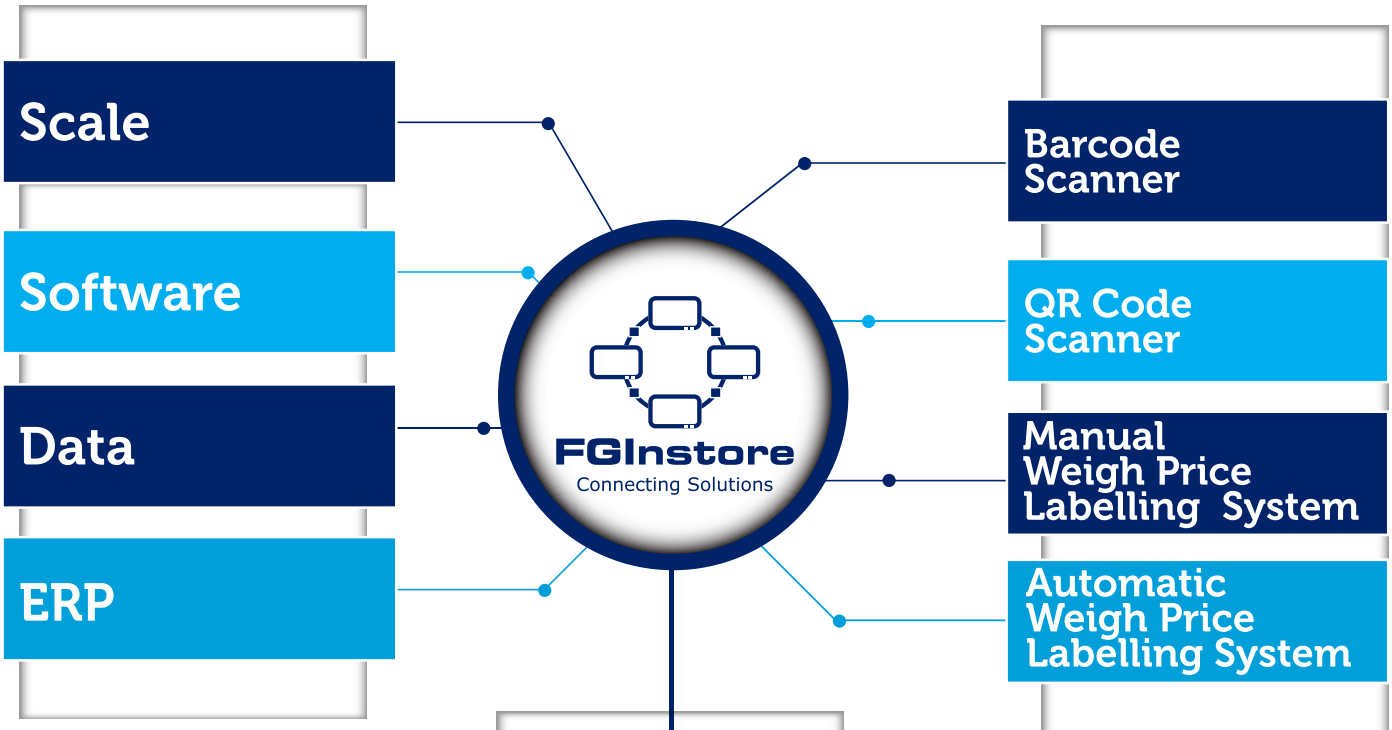
FABBRIGROUP

Today's **software for managing weighing devices** is required to interface with different company sectors, playing an increasingly central role in business.

Initially developed to enrich the Fabbri "Elixa Libra" offer, **FGInstore** is today a software that can be used to transfer data from devices such as totems, scales, scanners, digital labels or from data management software such as those on traceability or other product information.

FGInstore collects them and makes them **available**, **readable**, and therefore **usable** as needed.

The communication tools, each designed to read the specific language of the interconnected device, transfer all data to a single **database**, also controlling the **transmission process** and monitoring the **communication protocols**.



Thanks to its **flexibility** and **modularity**, FGInstore responds to the needs of the different company departments. Easily managing all the **information**, **necessary or supplementary** for the weighing activity, such as lots with receipt details, food traceability, ingredients, nutritional values, allergens and any other data.

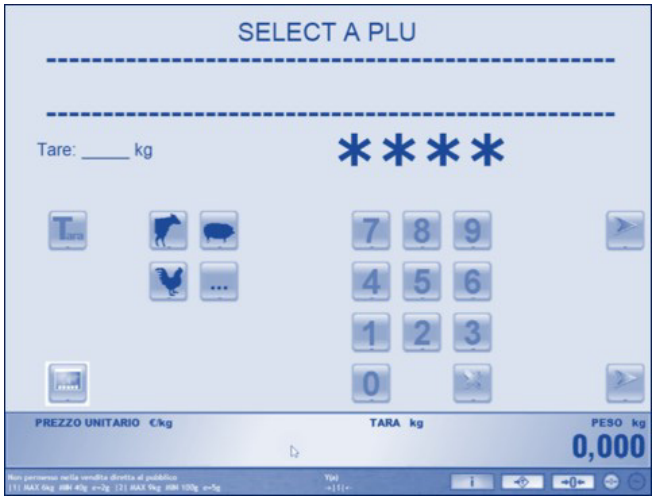
The **versatile architecture** on which FGInstore is based further allows it to interact with a wide variety of accessory devices in **full IT security**.

The accessibility of FGInstore to **centralised data** is also a valuable source of information for the various **management activities**.

FGINSTORE MAIN MODULES

FGInstore Graphic User Interface

Customised graphic user interface designed to **simplify usability**, for example by grouping PLUs by category or type.



FGInstore Master Data

Master Data, the main data file that **collects data** from all devices connected to FGInstore, may include key PLU information, lot number, birth place, breeding place, cutting place and barcode. It can also include all **production details** such as weights, totals, etc. It also aims to produce **reports** with statistics, performance, inventory management.
